Due to a technical problem fig. 2(a) was not correctly displayed. The amended fig. 2 is shown below. We deeply apologize to the authors for the inconvenience occurred.

Fig. 2: (Color online) (a) Values of R_i for controlling each node in the Laplacian matrix of a chain with 30 nodes, the black circles are obtained from eq. (5) and the solid circles are obtained directly by calculating the rank (C). (b) All possible values of $N - R_i$ for the Laplacian matrix vs. the chain length N. For a fixed value of N, there are a finite number of R_i values. (c) D_L , the number of distinct values of control range R_i vs. N. Each distinct value of D_L is marked with a different symbol and color.
