In the original article the author has remarked a minor mistake on page 169, which changes the result displayed in eq. (6), but does not affect any of the conclusions of the paper. In line 13, the exponent n is to be changed to $n/2$. Consequently, in all following expressions $\ln b$ is to be multiplied by 2 wherever it appears. Equation (6) thus reads

$$\rho = 1 + \frac{\ln(1-w)}{2 \ln b}.$$
